

To whomever it may concern,

Ashwin's aims and objectives for his educational future:

This year, I began specializing in mechanical engineering, diving into areas closely aligned with my interests, including fluid mechanics and thermodynamics. These fields resonate with my career ambitions, as I aim to work on process controls and integrate complex systems. My immediate academic goal is to enhance my understanding and boost my GPA, especially given my semester's challenging course load. In my second semester, I'll engage in project-based courses alongside an introduction to electrical and circuit engineering—another field I'm passionate about. As I advance, I aspire to secure the dean's research award in my third year, allowing me to build research expertise while continuing my studies. Outside academics, I remain active as a student engagement leader for the engineering faculty, supporting new students and fostering community.

This past summer, I was a volunteer assistant coach for a U-13 travel basketball team, in addition to helping with other development teams. I look forward to returning to CYDC basketball as a coach this summer, further developing my leadership skills.

Following my third year, I plan to complete an 18-month co-op term (with either Cenovus, Spartan, Controls or a University of Alberta connection), which will count toward my APEGA stamp certification training and extend my expected graduation to 2027-28. Depending on my research experience, I may either enter Alberta's workforce or continue my research at the University of Alberta. After completing my degree, I aim to serve in the Royal Canadian Army as a field or R&D engineer, following training as an engineering field service operator in Alberta. For further education, I hope to pursue a Master's in Business, which, combined with my leadership experience and potential service, will help me become the person of character and dedication I envision for my future.

Thank you for your consideration and time to read my letter.

Sincerely,

Ashwin Conrad
